

## ■ ParKwater® HV15B Land-based Mechanical Evaporator

ParKwater® HV15B is a land-based mechanical vaporizer. It is simply designed, stable and reliable. Best for larger areas where wastewater contains lower dissolved solids or smaller to no particulates. It is a better solution to wastewater.

- **Flexibility**  
It can be situated vertically or angled over the pond, and lower or raise the boom by manually operation.
- **High Performance**  
High-speed impellers process the best water droplets to evaporate, with up to 15 times evaporation efficiency than evaporation ponds.
- **Easy Maintenance**  
It is easy to clean up and maintain, and requires no weekly bearing lubrication.
- **Minimal Block**  
Particles smaller than 5mm is easy to pass and brings minimal clogging.
- **Superior Quality**  
It has been applied successfully in industry and outside environment for many years. The key parts are made of stainless steel to prolong the service life in the critical environment.
